

Curriculum Errata Notice

2027 Level I CFA Program

Issue date: July 2026

Welcome to the Curriculum Errata Notice.

We review and confirm potential errors to ensure you can study with confidence. This notice includes reported issues that could affect your understanding, such as miscalculations, incorrect explanations, or mislabeled exhibits.

For the most current information, regularly check the Learning Ecosystem (Canvas) or this document. Due to the nature of our publishing process, corrections may not appear immediately in our printed materials.

In this document, you will find:

- Table of Contents by Course
- New Errata marked since the last notice
- Full list of errata organized by Course

If you spot something that seems incorrect, please let us know: cfainst.is/errata. Every report is carefully reviewed and investigated by our subject matter experts.

All the best as you continue your studies!

Forgoing the discount is using the supplier's financing and will result in the issuer stretching out payments on accounts payable, putting less drain on liquidity in the short run. This action increases the issuer's cash conversion cycle. | A is correct. Forgoing the discount is using the supplier's financing and will result in the issuer stretching out payments on accounts payable, putting less drain on liquidity in the short run. This action decreases the issuer's cash conversion cycle. |

| 2 Feb 2026 | 6: Analysis of Inventories | Practice Problems | Page 207 Question 34 Solution | C is correct. In a period of rising inventory costs, inventory valued using FIFO would have relatively higher values compared to inventory valued using LIFO. Thus, any mark downs of inventory values to NRV would have the least impact on inventories valued using the LIFO method as they are already conservatively valued. | C is correct. In a period of declining inventory costs, inventory valued using FIFO would have relatively lower values compared to inventory valued using LIFO. Thus, any mark downs of inventory values to NRV would have the least impact on inventories valued using the FIFO method. |
