

Curriculum Errata Notice

2026 CIPM

Issue date: December 2025

Welcome to the Curriculum Errata Notice.

We review and confirm potential errors to ensure you can study with confidence. This notice includes reported issues that could affect your understanding, such as miscalculations, incorrect explanations, or mislabeled exhibits.

For the most current information, regularly check the Learning Ecosystem (Canvas) or this document. Due to the nature of our publishing process, corrections may not appear immediately in our printed materials.

In this document, you will find:

- Table of Contents by Course
- New Errata marked since the last notice
- Full list of errata organized by Course

If you spot something that seems incorrect, please let us know: <u>cfainst.is/errata</u>. Every report is carefully reviewed and investigated by our subject matter experts.

Good luck with your studies!

New: 25 Nov 2025	2: Performance Evaluation: Rate-of- Return Measurement	Common Shares	Page 237 Example 4 Question 1	Calculate the income return, price return, and total return on holding XOM from the close of trading on the 7 February through 8 February 2011 (assuming purchase at the close of trading on 7 February 2011) and for the month of February.	Calculate the income return, price return, and total return on holding XOM from the close of trading on the 7 February through 8 February 2011 and for the month of February.
New: 14 Nov 2025	2: Performance Evaluation: Rate-of- Return Measurement	Returns on Foreign Assets	Page 246 Example 9 Solution	Portfolio return in \$ = (1.0976) (0.75/0.70) -1 = (1.0976) (1.0714) - 1 = 17.6% Portfolio return in £ = (1.0976) (1.20/1.30) -1 = (1.0976) (0.9231) - 1 = 1.32% Portfolio return in ¥ = (1.0976) (0.009091/ 0.010000) $-1 = (1.0976) (0.909100) - 1 = -0.22%$	Portfolio return in $\$ = (1.0976)(\mathbf{0.70/0.75}) - 1 = (1.0976)(0.9333) = 1.02440 - 1 = 2.44\%$ Portfolio return in $\$ = (1.0976)(\mathbf{1.30/1.20}) - 1 = (1.0976)(1.0833) = 1.18903 - 1 = 18.90\%$ Portfolio return in $\$ = (1.0976)(\mathbf{0.010000/0.009091}) - 1 = (1.0976)(1.1000) = 1.2073 - 1 = 20.73\%$

21 Au 2025	g 2: Performance Evaluation: Rate-of- Return Measurement	Solutions	Pages 305- 306 Solution to 3	C is correct. The semi-annual coupon is 12%/2 × \$1,000 = \$60. There are two months between 1 February and 31 March. The accrued interest from 1 February to 31 March is \$60 × 2/6 = \$20. If the bond was purchased on 31 March, the bond investor would pay \$20 in accrued interest. The dirty price (total price) paid on 31 March would be \$930 + \$20 = \$950. The clean price at the sale date is \$980, but the seller will receive 5 months of accrued interest, which is \$60 × 5/6 = \$50. The price return is the change in the dirty prices between 30 June and 31 March divided by the dirty price on 31 March: A is incorrect and is calculated by using clean prices in the numerator. B is incorrect and is calculated by using the clean prices in both the denominator and the numerator.	A is correct. The semi-annual coupon is 12%/2 × \$1,000 = \$60. There are two months between 1 February and 31 March. The accrued interest from 1 February to 31 March is \$60 × 2/6 = \$20. If the bond was purchased on 31 March, the bond investor would pay \$20 in accrued interest. The dirty price (total price) paid on 31 March would be the clean price \$930 + the accrued interest \$20 = \$950. The clean price at the sale date is \$980. The price return is the change in the clean prices between 30 June and 31 March, \$50, divided by the dirty price on 31 March, \$950, which is 5.26%. C is incorrect and is the total return, which is calculated by using dirty prices in both the numerator and denominator. B is incorrect and is calculated by using the clean prices in both the denominator and the numerator.
